The effects of moisture on your firearm in a conventional case and with the Envelop case

Envelop Gun Cases

Envelop Protective Cases were developed to protect your valuable firearms from the damage corrosion can cause. Whether you are storing your shotgun/rifle/handgun after a rainy day in the field or over a long winter, the environmental damage can be severe, possibly even ruining your prized firearm.

The attached set of slides shows what can happen when you put a wet gun in a conventional case and what happens when you put an identical gun in an Envelop case.

The first slide shows 2 clean shotguns, one in a conventional case and one in an Envelop case.

Misting the two shotguns and the cases replicating the effects of rain

Putting a wet shotgun into your case is the cause of corrosion, especially if the gun is left for an extended time.

After an extended period of harsh conditions, a shotgun in a traditional case will severely rust, while a wet gun placed in an Envelop case will be protected.

A valuable firearm can be severely damaged if left in a conventional case, but the Envelop case will fully protect your shotgun, rifle, A/R or collectible from the severe damages that can normally occur with water, heat and environmental issues.

You can trust your Envelop Case to protect your high value firearm.
